

Apex AI-ENABLED MISSION SOFTWARE FOR FASTER, MORE CONFIDENT DECISIONS.

Disconnected systems slow the fight. Apex helps operators cut through the noise and move faster.

Apex™, Ultra I&C's integrated mission software stack, brings mission applications, secure data management and AI-enabled tools together in one modular environment. Built for operators who need speed, flexibility and interoperability, it turns fragmented data into decision-ready insight when and where it matters most.

By connecting the software and secure management layers behind mission execution, it links command and control, AI and data correlation to support fires, sustainment, movement and maneuver. It reduces cognitive burden, helps turn operator intent into action and cuts timelines from hours or days to minutes.

The result is faster decisions, greater agility and a stronger software foundation for modern operations.

UNIFIED MISSION SOFTWARE STACK

Brings mission applications, secure data management and AI-enabled tools into one modular environment.

AI-ENABLED DECISION SUPPORT

Helps operators fuse data, surface what matters and move from analysis to action faster.

OPEN, MODULAR ARCHITECTURE

Integrates with Ultra I&C capabilities, customer mission software and third-party tools without locking teams into a closed system.

SECURE, MISSION-READY PERFORMANCE

Supports multi-level operations, reduces latency and helps teams keep pace in contested environments.
