MicroCrypto

FOR SOLDIER-WORN ENCRYPTION

SOLDIER-WORN ENCRYPTION

A Low Size, Weight, Power and Cost (SWaP-C), losable, hardware-based, software-enabled quantum-secure crypto solution.

Go further with MicroCrypto for the same power—MicroCrypto's data link "Range Advantage."

Power inefficient legacy solutions → MicroCrypto's Endurance Advantage

For the same energy, get longer operations with MicroCrypto's "Endurance Advantage."

[illegible]

Protect all your information; don't expose header information that can be exploited. Benefit from MicroCrypto's "Anti-Track Advantage."

MicroCrypto

Reduced management overheads, store on the shelf and leave in the field as opposed to a safe

Reducing the management burden compared to high-grade solutions with simplified deployments.

The diagram illustrates a transition from a single radio to three radios. On the left, a single radio icon is shown with the text "Trust a radio to run your cryptography?" below it. A yellow arrow labeled "MicroCrypto" points from this single radio to a group of three radio icons on the right. Below the three radios is the text "Use the radio you want, with MicroCrypto handling your security".

Use your radios of choice without depending on them for encryption by separating the cryptographic function from the radio hardware.
